EDUCATION

University of Central Florida | B.S. Computer Science | Aug 2019 – Aug 2023

EXPERIENCE

F5 | Software Engineer II

Aug 2023 – Present

Python, React, Docker, Kubernetes, Linux, Networking

- Architected and independently maintain BOS, a full-stack platform (Python API, React UI, database, deployment) used by the entire F5OS Dev organization for build verification results management — features automated triage, live hardware health visualization, self-service BVT configuration, failure trend analysis, and report generation.
- Authored 100+ integration tests and automation scripts (200k+ logged runs), created 500+ tracking issues, triaged thousands of BVT results, and filed 275+ bugs directly driving fixes across F5OS releases.
- Recognized SME in test automation and pipeline development spanning OS installs, container orchestration (Docker, K8s, K3s), L1–L4 networking, HA failover, and automated hardware recovery across rSeries and VELOS platforms.
- Led or supported BVT execution for numerous customer EHF releases, CVE releases, and major milestones including F5OS 2.0 — adjusted automation for upgrade/downgrade paths and ensured on-time delivery for revenue-critical deadlines.
- Routinely pulled into high-priority customer escalations to hunt, reproduce, and root-cause complex HA, upgrade, and restart issues — developers regularly cite debug contributions as instrumental to their fixes.
- Created end-to-end HA upgrade BVT scenarios as single automated jobs, converting customer-found bugs into permanent pipeline coverage to prevent future escapes.
- Mentors new hires and interns, creates documentation and training materials, leads knowledge-share sessions, and owned security initiatives including credential rotation across the automation codebase.
- Earned 31 performance awards in under 3 years: 25 Shout Outs, 3 BeF5 Group Awards, 3 Individual BeF5 Awards.

VS & Co. | Software Engineer Intern

May 2022 – Aug 2023

Go, Azure, Docker, Kubernetes, C#, Java, SQL

- Optimized core service performance by 100–1000x through data structure optimization; supported 100+ Go microservices in Azure Kubernetes Services.
- Conducted root cause analysis of payment system bugs impacting 1000+ stores; identified production faults preventing thousands in potential losses.

PROJECTS

Transit Explorer | Live | GitHub

React, Flask, SQLAlchemy, Firebase, Fly.io, Vercel

- Built full-stack gamified transit app for Puget Sound — React/Vite SPA with Leaflet maps, Flask REST API, Firebase Auth, Sentry observability, GitHub Actions CI/CD. Users log rides, track completion, earn achievements, compete on leaderboards.

Solar Panel Visualizer | GitHub

JavaScript, Python, Google Solar API, React, PostgreSQL

- Created web app leveraging Google Solar API for dynamic visualization of solar panel configurations with real-time ROI calculations.

Chess Engine & Multi-Threaded AI | Paper

Java

- Developed chess engine with multi-threaded AI achieving 270% performance increase through parallelized alpha-beta pruning.

TECHNICAL SKILLS

Languages: Python • Go • Java • JavaScript • C# • C • SQL • Dart

Infrastructure & Tools: Docker • Kubernetes • Azure • Linux • GitSwarm • Fly.io • Postman • Vercel • Sentry

Frameworks & Databases: Flask • React.js • Node.js • Flutter • Unity • Firebase • MongoDB • PostgreSQL
